

Dr. James A. Behan, Ph.D. Chargé de Recherche CNRS

PROFILE

- Chargé de Recherche CNRS at UMR 6226 - Institut des Sciences Chimiques de Rennes. My research interests include nanocarbon electrochemistry, electrocatalysis, bionanoscience and bioelectrochemical systems.
- Former Marie Skłodowska-Curie Fellow, Irish Research Council Postdoctoral Fellow and Trinity Scholar in Chemistry.
- 19 publications (8 as first author, 3 as corresponding author) in peer-reviewed journals; 3 peer-reviewed book chapters in electrocatalysis of carbon electrode materials and electroactive bacteria; 9 oral and 7 poster communications; h-index = 11.
- Expert in electrochemistry, electrocatalysis, carbon nanomaterials, nanomaterial synthesis and nanomaterial surface-biomolecule interactions. Current specialisation in bionanoscience, bioelectrochemistry and interactions of electroactive bacteria with interfaces.
- Experienced lecturer and scientific communicator with years of chemistry teaching and lecturing experience at university level in both english and french.
- Strong commitment to scientific outreach and engaging the public in research.

EDUCATION

2014 – 2018	PhD in Chemistry School of Chemistry <i>Trinity College Dublin</i>
2016 – 2017	Certificate in Statistics DISTINCTION School of Computer Science and Statistics <i>Trinity College Dublin</i>
2010 – 2014	Bachelors in Chemistry FIRST CLASS HONORS AND GOLD MEDALIST School of Chemistry <i>Trinity College Dublin</i>

SUCCESSFUL GRANTS

2024-2025	Défi Scientifique Projet de Recherche- 16k€ <i>Université de Rennes</i>
2023 – 2024	Maimonide Fellowship - 60k€ <i>French Government & Israeli Government</i>
2022 – 2024	Ulysses Fellowship - 8.5k€ <i>French Government & Irish Research Council</i>
2022	Marie Skłodowska-Curie BIENVENUE Fellowship <i>European Comission & Region Bretagne</i>
2020 – 2021	Postdoctoral Fellowship Award <i>Irish Research Council</i>
2014	Postgraduate Scholarship <i>Irish Research Council</i>

WORK EXPERIENCE

OCT 2023 - PRESENT
CNRS - Institut des Sciences Chimiques de Rennes
Chargé de Recherche CNRS

I was appointed to the CNRS as Chargé de Recherche in 2023, taking up my post at the Université de Rennes in October. My current research focuses on interface modifications for the development of electroactive biofilms and the synthesis of nanomaterials with a biological and electrochemical identity. I also teach electrochemistry for first year engineering master students at the École de Chimie and for the international two-year masters in materials science course MaMaSELF.

JAN 2022-SEPT 2023
Institut des Sciences Chimiques de Rennes, Université de Rennes I
Marie Skłodowska-Curie Fellow

My Marie Curie research project was entitled "BioNanoCat: Biogenic Nanoparticles Derived from Bacterial Biofilms for Electrocatalysis." Working at the Institut des Sciences Chimiques de Rennes with Dr. Frédéric Barrière, my research focused on the application of biofilms of exoelectrogenic bacteria as 'living factories' for the formation of biogenic nanoparticles/nanocatalysts for catalytic applications. Bacteria possess a plethora of defense mechanisms against the presence of toxic metal ions in their environment, including the capacity to bind ions at their surface and reduce them to form nanoparticles. This provides possible avenues of biosynthesis of metal nanoparticle-based catalysts for important processes, such as the oxygen reduction and hydrogen evolution reactions.

APR 2019 – NOV 2021
Centre for Bio-Nano Interactions
Postdoctoral Fellow

My first postdoctoral fellowship project was in the area of biological system - nanoparticle interactions. With Prof. Kenneth Dawson at the Centre for BioNano Interactions (CBNI) at University College Dublin, I worked at the interface of chemistry and biology in nanosynthesis, especially of ligand-decorated nanoparticles for biological applications. My project, which was funded by the Irish Research Council, focused on protein-decorated nanoparticle interactions with target receptors *ex-situ*. This field has important implications for nanomedicine, as drug delivery and diagnostic technologies are increasingly based on the use of nanoparticle-based formulations to target specific cells.

SEPT 2014 – SEPT 2018
School of Chemistry, Trinity College Dublin
PhD Student

My PhD project was carried out under the supervision of Prof. Paula E. Colavita at Trinity College, Dublin. This project focused on the synthesis and characterisation of carbon nanomaterials for applications in electrocatalysis and electroanalysis. I focused

specifically on nitrogen doping of carbons scaffolds and its effects on the oxygen reduction reaction, with a secondary focus on interfacial modifications of carbon electrodes for anti-biofouling applications and the analysis of biologically-relevant redox species such as dopamine and other catechols. Electrochemical properties were correlated to carbon nanostructure using a combination of spectroscopic techniques including infrared spectroscopy, x-ray photoelectron spectroscopy and spectroscopic ellipsometry. My thesis was titled *Electrochemical probing of the nanostructure of non-crystalline nitrogenated carbon materials for electrocatalysis*.

SEP 2018 – APR 2019

School of Pharmacy, Trinity College Dublin
Adjunct Lecturer in Physical Chemistry

In parallel with the final year of my PhD, I took on a temporary post as a lecturer in the School of Pharmacy, Trinity College Dublin. Here I was tasked with delivering a lecture series (3h/week) in physical chemistry for pharmacy students, focused mainly in the areas of molecular interactions, thermodynamics and chemical kinetics. I prepared the lecture series in collaboration with the course coordinator, Prof. Eduardo Ruiz-Hernandez, set the final exam and defined the marking scheme for the course.

AREAS OF EXPERTISE

ELECTROCHEMISTRY	Electrocatalysis, Microbial Fuel Cells, Electropolymerisation, Fundamental Kinetic Studies, Supported Metal Catalysts, Oxygen Reduction Reaction
INTERFACES	Covalent Modification of Nanomaterials, Biofilms, Biomolecule-Nanoparticle Interactions
MICROBIOLOGY	Electrochemical Quartz Crystal Microbalance, Aseptic Anaerobic Culturing, Electroactive bacteria, DNA extraction and 16S rRNA sequencing
CARBON MATERIALS	Electrochemistry on electroactive bacteria, Amorphous Carbons, Nitrogen-Doped Carbon, Carbon Supports in Electrocatalysis
CHARACTERISATION	XPS, UV-Vis Spectroscopy, IR Spectroscopy, AFM, Ellipsometry, TEM, SEM, Raman Spectroscopy

AWARDS

2022	EuroScience Open Forum Poster Prizewinner <i>Euroscience Open Forum Satellite Event, Leiden</i>	2016	Teaching Award in Practical Chemistry <i>School of Chemistry, Trinity College Dublin</i>
2022	Laureate of AMI Emergence Programme <i>Technopole de Rennes</i>	2014	Gold Medal in Natural Sciences - Chemistry <i>School of Chemistry, Trinity College Dublin</i>
2012-2017	Full Academic Scholarship Award <i>Trinity College Dublin</i>	2013	Dr George A. Lonergan Prize in Chemistry <i>School of Chemistry, Trinity College Dublin</i>
2016	Young Student Award for Best Presentation <i>European Materials Research Society Fall Meeting</i>	2011	Billy Robertson Memorial Prize in Biology <i>School of Chemistry, Trinity College Dublin</i>

TEACHING EXPERIENCE

Lecturing

As outlined above, I worked as an adjunct lecturer in physical chemistry for the School of Pharmacy, Trinity College Dublin, in 2018. This gave me broad experience lecturing to a large audience

of around 100 bachelor's students, 3h per week, as well as experience preparing lecture notes, slides, problem sheets, exam questions and marking schemes. I also designed and delivered a lecture and tutorial series aimed at first year undergraduates in chemistry in the 2017-18 academic year with 2 contact hours with 2 groups of students per week for the School of Chemistry. This gave me experience in tailoring courses and teaching styles to weaker students who had no prior experience in chemistry before coming to university. I transferred these skills during my postdoc at the Centre for BioNano Interactions, University College Dublin. There I organised a master class as part of the *Current Trends in Nanomedicine* module for UCD's nanoscience Master's Degree program. The course was organised in collaboration with Prof. Kenneth Dawson, a leading expert in the field of nanomaterial-biological systems interactions. I also set the course assignment and marking scheme and corrected the exam.

Practical Teaching

I was an award-winning laboratory demonstrator in physical chemistry laboratory sessions to hundreds of students (3-6 contact hours/week during entire academic years of 2014-2017). After this experience I continued to organise labs and tutorial sessions: at the Centre for BioNano Interactions I organised workshops for PhD and masters students in experimental design and statistics, graphical representation of data for publication, scientific writing and preparation of scientific talks for thesis defence and international conferences. Most recently in Rennes I have carried out practical laboratory sessions in fundamental electrochemistry with my supervisor, Prof. Frédéric Barrière.

For French language teaching, I teach practical laboratory sessions in electrochemistry with Prof. Didier Hauchard at the École de Chimie in Rennes (total of more than 60h contact time with students).

SCIENTIFIC LEADERSHIP

In my present role at the ISCR I supervise one PhD student (thesis started Sept 2023), one post-doc and two M2 students. I previously mentored one student intern (internship completed in March 2023) and will supervise another masters student in the area of biofilm formation studies starting from April 2024. Along with Prof. Frédéric Barrière I have successfully co-authored two collaborative grants with labs in Ireland and Israel. Our current research is highly interdisciplinary and collaborative with colleagues in Geoscience and Microbiology - I have taken the lead in training postdoctoral colleagues in these disciplines in physical chemistry and electrochemical methods in our laboratory.

During my doctoral studies I mentored numerous project students and undergraduate visitors to our laboratory. I designed an undergraduate summer project in laboratory research and scientific writing which thanks to my guidance and mentoring resulted in a 2nd year undergraduate intern co-authoring a publication with me in *Electrochimica Acta* (2019).

At the Centre for BioNano Interactions I was the safety officer and oversaw the training and induction of new students into the team. I supervised and guided 6 Ph.D. students in their daily research activities and fully oversaw 1 masters student project (thesis submitted and defended 2020). I was the point of contact for an industrial collaboration between CBNI and Intel Ireland in the area of nanomaterials safety and environmental impact, which involved supervising and advising the project of one industrial PhD student (project to be completed 2023). As a senior group mem-

ber I also ran workshops in management of data, applied my Certificate in Statistics to teach short classes in statistical analysis and the production of scientific figures for publication which were delivered to the junior members of the research team as a form of training and induction.

OUTREACH

Promoting Science to the Masses

In the summer of 2023 I participated in the filming of a short programme intended for the *Esprit Sorcier* science communication programme. The segment filmed presented a step-by-step process for preparing and studying microbial fuel cell systems and is designed to inspire children and young adults to take an interest in a career in science. The programme was released on French television and online in February 2024 and can be viewed [here](#).

I am a laureate of the AMI Emergence Programme, which is an entrepreneurship and outreach programme designed to train scientists in commercialising their research and communicating its value to policymakers, investors and the general public. As part of this programme I gave a 'pitch' of my work to an audience comprised of investors and local government officials in Brittany. I also participated in the Fête de la Science, an outreach event where I carried out public demonstrations of chemical experiments to schoolchildren and the general public. My presentation (in French) can be viewed [here](#).

During my doctoral studies I was a volunteer with the Voluntary Tuition Programme, where I taught and mentored second-level students from disadvantaged schools in Dublin City Centre in science and mathematics with free one-on-one lessons every week. The programme also involved short talks to promote a career in STEM fields.

I maintain a blog where I post updates on my research at <https://www.jamesbehan.net>
