

Dr. James A. Behan, Ph.D. Chargé de Recherche CNRS

PROFILE

- Assistant Professor (Chargé de Recherche CNRS) at the Institut des Sciences Chimiques de Rennes. My research interests include nanocarbon electrochemistry, electrocatalysis, bio-nanoscience and bioelectrochemical systems for applications in energy and the environment. I coordinate the ANR Young Research Project HYBNA, the CNRS 8oPrime project Baux-CLEAN and the MITI project MicroBaux.
- Former Marie Skłodowska-Curie Fellow, Irish Research Council Postdoctoral Fellow and Trinity Scholar in Chemistry.
- 25 publications (8 as first author, 6 as corresponding author) in peer-reviewed journals; 3 peer-reviewed book chapters in electrocatalysis of carbon electrode materials and electroactive bacteria; 13 oral and 11 poster communications; h-index = 12.
- Expert in electrochemistry, electrocatalysis, carbon nanomaterials, nanomaterial synthesis and nanomaterial surface-biomolecule interactions. Current specialisation in bio-nanoscience, bioelectrochemistry and interactions of electroactive bacteria with interfaces.
- Experienced lecturer and scientific communicator with years of chemistry teaching and lecturing experience at university level in both english and french.
- Strong commitment to scientific outreach and engaging the public in research.

EDUCATION

- 2014 – 2018 **PhD in Chemistry**
School of Chemistry
Trinity College Dublin
- 2016 – 2017 **Certificate in Statistics**
DISTINCTION
School of Computer Science and Statistics
Trinity College Dublin
- 2010 – 2014 **Bachelors in Chemistry**
FIRST CLASS HONORS AND GOLD MEDALIST
School of Chemistry
Trinity College Dublin

SUCCESSFUL GRANTS

- 2025-2029 **ANR Young Researcher (JCJC) Award HYBNA - 301k€**
French National Research Agency (ANR)
- 2025-2028 **CNRS 80Prime - 36k€ + 3 Year PhD funding**
CNRS

2024	Scientific Installation Grant - 40k€ <i>Rennes Métropole</i>
2024-2025	CNRS MITI AAP Pollution/Dépollution- 36k€ <i>CNRS</i>
2024-2025	Défi Scientifique Projet de Recherche- 16k€ <i>Université de Rennes</i>
2023 – 2024	Maimonide Fellowship - 60k€ <i>French Government & Israeli Government</i>
2022 – 2024	Ulysses Fellowship - 8.5k€ <i>French Government & Irish Research Council</i>
2022	Marie Skłodowska-Curie BIENVENUE Fellowship <i>European Comission & Region Bretagne</i>
2020 – 2021	Postdoctoral Fellowship Award <i>Irish Research Council</i>

AREAS OF EXPERTISE

ELECTROCHEMISTRY	Electrocatalysis, Microbial Fuel Cells, Electropolymerisation Fundamental Kinetic Studies Supported Metal Catalysts, Oxygen Reduction Reaction
INTERFACES	Covalent Modification of Nanomaterials Biofilms Biomolecule-Nanoparticle Interactions Electrochemical Quartz Crystal Microbalance
MICROBIOLOGY	Aseptic Anaerobic Culturing Electroactive bacteria DNA extraction and 16S rRNA sequencing Electrochemistry on electroactive bacteria
CARBON MATERIALS	Amorphous Carbons, Nitrogen-Doped Carbon, Carbon Supports in Electrocatalysis
CHARACTERISATION	XPS, UV-Vis Spectroscopy IR Spectroscopy, AFM Ellipsometry, TEM, SEM Raman Spectroscopy

AWARDS

2022	EuroScience Open Forum Poster Prizewinner <i>Euroscience Open Forum Satellite Event, Leiden</i>
2022	Laureate of AMI Emergence Programme <i>Technopole de Rennes</i>
2012-2017	Full Academic Scholarship Award <i>Trinity College Dublin</i>
2016	Young Student Award for Best Presentation <i>European Materials Research Society Fall Meeting</i>
2016	Teaching Award in Practical Chemistry <i>School of Chemistry, Trinity College Dublin</i>
2014	Gold Medal in Natural Sciences - Chemistry <i>School of Chemistry, Trinity College Dublin</i>
2013	Dr George A. Lonergan Prize in Chemistry <i>School of Chemistry, Trinity College Dublin</i>

WORK EXPERIENCE

CNRS - Institut des Sciences Chimiques de Rennes **Chargé de Recherche CNRS**

OCT 2023 - PRESENT

I was appointed to the CNRS as Chargé de Recherche in 2023, taking up my post at the Université de Rennes in October. My current research focuses on interface modifications for the development of electroactive biofilms and the synthesis of nanomaterials with a biological and electrochemical identity. I teach photoelectrochemistry for the international masters course LUMOMAT as well as practical electrochemistry for first year engineering master students at the École de Chimie and for the international two-year masters in materials science course MaMaSELF.

Institut des Sciences Chimiques de Rennes, Université de Rennes I **Marie Skłodowska-Curie Fellow**

JAN 2022-SEPT 2023

My Marie Curie research project was entitled "BioNanoCat: Biogenic Nanoparticles Derived from Bacterial Biofilms for Electrocatalysis." Working at the Institut des Sciences Chimiques de Rennes with Dr. Frédéric Barrière, my research focused on the application of biofilms of exoelectrogenic bacteria as 'living factories' for the formation of biogenic nanoparticles/nanocatalysts for catalytic applications. Bacteria possess a plethora of defense mechanisms against the presence of toxic metal ions in their environment, including the capacity to bind ions at their surface and reduce them to form nanoparticles. This provides possible avenues of biosynthesis of metal nanoparticle-based catalysts for important processes, such as the oxygen reduction and hydrogen evolution reactions.

Centre for Bio-Nano Interactions **Postdoctoral Fellow**

APR 2019 – NOV 2021

My first postdoctoral fellowship project was in the area of biological system - nanoparticle interactions. With Prof. Kenneth Dawson at the Centre for BioNano Interactions (CBNI) at University College Dublin, I worked at the interface of chemistry and biology in nanosynthesis, especially of ligand-decorated nanoparticles for biological applications. My project, which was funded by the Irish Research Council, focused on protein-decorated nanoparticle interactions with target receptors *ex-situ*. This field has important implications for nanomedicine, as drug delivery and diagnostic technologies are increasingly based on the use of nanoparticle-based formulations to target specific cells.

School of Chemistry, Trinity College Dublin **PhD Student**

SEPT 2014 – SEPT 2018

My PhD project was carried out under the supervision of Prof. Paula E. Colavita at Trinity College, Dublin. This project focused on the synthesis and characterisation of carbon nanomaterials for applications in electrocatalysis and electroanalysis. I focused specifically on nitrogen doping of carbons scaffolds and its effects on the oxygen reduction reaction, with a secondary focus on interfacial modifications of carbon electrodes for anti-biofouling applications and the analysis of biologically-relevant redox species such as dopamine and other catechols. Electrochemical properties were correlated to carbon nanostructure using a combination of spectroscopic techniques including infrared spectroscopy, x-ray photoelectron spectroscopy and spectroscopic ellipsometry. My thesis was titled *Electrochemical probing of the nanostructure of non-crystalline nitrogenated carbon materials for electrocatalysis*.

School of Pharmacy, Trinity College Dublin **Adjunct Lecturer in Physical Chemistry**

SEP 2018 – APR 2019

In parallel with the final year of my PhD, I took on a temporary post as a lecturer in the School of Pharmacy, Trinity College Dublin. Here I was tasked with delivering a lecture series (3h/week) in physical chemistry for pharmacy students, focused mainly in the areas of molecular interactions, thermodynamics and chemical kinetics. I prepared the lecture series in collaboration with the course coordinator, Prof. Eduardo Ruiz-Hernandez, set the final exam and defined the marking scheme for the course.

TEACHING EXPERIENCE

Lecturing

As outlined above, I worked as an adjunct lecturer in physical chemistry for the School of Pharmacy, Trinity College Dublin, in 2018. This gave me broad experience lecturing to a large audience of around 100 bachelor's students, 3h per week, as well as experience preparing lecture notes, slides, problem sheets, exam questions and marking schemes. I also designed and delivered a lecture and tutorial series aimed at first year undergraduates in chemistry in the 2017-18 academic year with 2 contact hours with 2 groups of students per week for the School of Chemistry. This gave me experience in tailoring courses and teaching styles to students who had no prior experience in chemistry before coming to university. I transferred these skills during my postdoc at the Centre for BioNano Interactions, University College Dublin. There I organised a master class as part of the *Current Trends in Nanomedicine* module for UCD's nanoscience Master's Degree program. The course was organised in collaboration with Prof. Kenneth Dawson, a leading expert in the field of nanomaterial-biological systems interactions. I also set the course assignment and marking scheme and corrected the exam.

Since joining the CNRS I teach the fundamentals of photoelectrochemistry as part of the LUMOMAT master's degree programme.

Practical Teaching

I was an award-winning laboratory demonstrator in physical chemistry laboratory sessions to hundreds of students (3-6 contact hours/week) during entire academic years of 2014-2017. After this experience I continued to organise labs and tutorial sessions: at the Centre for BioNano Interactions I organised workshops for PhD and masters students in experimental design and statistics, graphical representation of data for publication, scientific writing and preparation of scientific talks for thesis defence and international conferences. Most recently in Rennes I have carried out practical laboratory sessions in fundamental electrochemistry with my supervisor, Prof. Frédéric Barrière.

For French language teaching, I previously taught practical laboratory sessions in electrochemistry with Prof. Didier Hauchard at the École Nationale Supérieure de Chimie in Rennes and currently teach at the Rennes Technological University.

SCIENTIFIC LEADERSHIP

In my present role at the ISCR I supervise two PhD students (thesis started Sept 2023 and October 2025), one post-doc, 2 M1 students and one Master 2 student who defended his project in September 2025. I previously mentored an M2 student (defended January 2025), two M1 students (internships completed in July 2024) one student intern (internship completed in March 2023). Along with Prof. Frédéric Barrière I have successfully co-authored two collaborative grants with labs in Ireland and Israel. Our current research is highly interdisciplinary and collaborative with colleagues in Geoscience and Microbiology - I have taken the lead in training postdoctoral colleagues in these disciplines in physical chemistry and electrochemical methods in our laboratory.

During my doctoral studies I mentored numerous project students and undergraduate visitors to our laboratory. I designed an undergraduate summer project in laboratory research and scientific writing which thanks to my guidance and mentoring resulted in a 2nd year undergraduate intern co-authoring a publication with me in *Electrochimica Acta* (2019).

At the Centre for BioNano Interactions I was the safety officer and oversaw the training and induction of new students into the team. I supervised and guided 6 Ph.D. students in their daily research activities and fully oversaw 1 masters student project (thesis submitted and defended 2020). I was the point of contact for an industrial collaboration between CBNI and Intel Ireland in the area of nanomaterials safety and environmental impact, which involved supervising and advising the project of one industrial PhD student (project completed in 2023). As a senior group member I also ran workshops in management of data, applied my Certificate in Statistics to teach short classes in statistical analysis and the production of scientific figures for publication which were delivered to the junior members of the research team as a form of training and induction.

OUTREACH

Promoting Science to the Masses

In the summer of 2023 I participated in the filming of a short programme intended for the *Esprit Sorcier* science communication programme. The segment filmed presented a step-by-step process for preparing and studying microbial fuel cell systems and is designed to inspire children and young adults to take an interest in a career in science. The programme was released on French television and online in February 2024 and can be viewed [here](#).

I am a laureate of the AMI Emergence Programme, which is an entrepreneurship and outreach programme designed to train scientists in commercialising their research and communicating its value to policymakers, investors and the general public. As part of this programme I gave a 'pitch' of my work to an audience comprised of investors and local government officials in Brittany. I also participated in the Fête de la Science, an outreach event where I carried out public demonstrations of chemical experiments to schoolchildren and the general public. My presentation (in French) can be viewed [here](#). During my doctoral studies I was a volunteer with the Voluntary Tuition Programme, where I taught and mentored second-level students from disadvantaged schools in Dublin City Centre in science and mathematics with free one-on-one lessons every week. The programme also involved short talks to promote a career in STEM fields.

I maintain my own website where I post updates on my research and communication activities at <https://www.behanlab.com>
